

## Arrival Checklist

When you arrive at your campsite and you have parked up, make sure you are reasonably level. Not only for your sleeping comfort, but everything inside works better! Side to side is more important than front to back level.

We have put a small level near the stove to check. There are levelling blocks in the outdoor storage if you need to put them under one or two wheels.

Try not to park right under trees, as the shade will mean the solar panels don't work as well.

Make sure you have the best view to wake up to and you are not too close to your neighbours!

- If you have an electric hookup, attach that, if not turn the gas on.
- Put water in.
- Turn on the master switch & pump
- Turn the water on to heat (gas or electric setting)
- Turn the heating on (if required, again gas or electric setting)
- Turn the fridge on (gas or electric setting. You'll need to ignite it if it's on gas)
- Get the kettle on and relax!
