

## Water, Electric & Gas

Insert key to unlock, then push and turn to unlock the water cap.

When you hear water overflowing the tank is full.

The grey tap releases the used water. Please empty before return. The sink drains quite slowly because of where the pipe is routed, don't let any other waste go down it please as it could cause a blockage!

There is an electric cable in the back lounge storage. Simply hook up and put the cable here through the gap, then lock up again.

Don't drive off without checking around outside!

Then make sure the fridge, heating and water is on the electric setting.

(The microwave and electric hob will not work without an electric hook up.)

There will be at least 1 full tank of gas when you receive your motorhome. (If you're going on a long trip, you will need to top up yourself if you do run out).

To turn on, turn the top to the right. Make sure you turn it off when you set off.

If you have no electric hookup, make sure the heating, water and fridge are running on the gas setting. There are solar panels on the roof to top up the battery for lights etc.

If you need to change bottles, turn the gas off and move the orange hose to the other bottle. There is a spanner in the glove box (left hand thread).
